DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-26 and 45-46, drawn to a method of automatically providing reports on medical imaging devices comprising subscribing to receive reports on a plurality of medical imaging devices, compiling a customized customer profile, establishing a link between the medical imaging devices and a remote analysis center, acquiring examination data using the medical imaging devices, automatically transmitting the examination data to a remote analysis center, automatically standardizing the examination data, automatically screening the examination data for errors, automatically storing the examination data in a centralized database, automatically preparing reports based on the customized customer profile and the examination data, and automatically delivering the reports to the customer, classified in class 715, subclass 513.
 - II. Claims 27-44, drawn to a reporting network comprising a medical facility comprising a plurality of medical imaging devices, the medical imaging devices configured to automatically transmit medical imaging data to a remote location; and a remote analysis center electronically coupled to the medical facility and configured to automatically receive the medical imaging data transmitted from the medical imaging devices and further

configured to automatically generate reports from the data received from the medical imaging devices, classified in class 705, subclass 2.

- 2. The inventions are distinct, each from the other because of the following reasons: Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a method or system where a document is created and processed according to a standardized arrangement of interrelated hierarchical flow and page layout; invention II has a separate utility such as a computer implemented system or method particularly adapted for a health care management or delivery organization.. See MPEP § 806.05(d).
- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and/or because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
